

IMPORTANT INFORMATION INSIDE
PLEASE read carefully before using
your charger

NOTE: IMPACT™ universal chargers are equipped with a single metal sensor pin in the bottom of each charger well to ensure optimal charging of all supported batteries.

The four sensor pin contact holes on the underside of each adapter cup should be covered with the supplied adhesive strips when charging NiMH or NiCd batteries. To achieve maximum charging performance for Li-Ion batteries, please ensure the contact holes are open and exposed (no adhesive strip).
